

⇒ Build Agentic AI Application with memory using langchain.

→ A normal LLM call is stateless.

In langchain, Conversational memory means:

Previous messages (Query + responses)

+
Current user Query

+
Agent Prompt

LLM

⇒ LLM powered application + Tools + Memory.

Key Terms.

MessagePlaceholder

→ Used inside ChatPromptTemplate.

→ Used when we want to inject a list of previous messages into the current prompt.

↓
HumanMessage + AIMessage

Chat-history

↓

Store previous conversation.

```
chat-history = [
```

```
    HumanMessage(content = " ——— "),
```

```
    AIMessage(content = " ——— "),
```

```
    HumanMessage(content = " ——— "),
```

```
    AIMessage(content = " ——— "),
```

```
    ———  
    ———  
    ———
```

```
]
```

```
agent_executor.invoke(
```

```
    ———
```

```
    ———
```

```
    ———
```

```
    chat-history = ———
```

```
)
```

agent-scratchpad

- Not same as chat-history
- Stores the agent's current turn & their work.

for tool-calling agent, generally agent-scratchpad is used.
