Agentic Applications

Deployment Strategies

→ Blue - Green

↳ Maintain 2 environments.

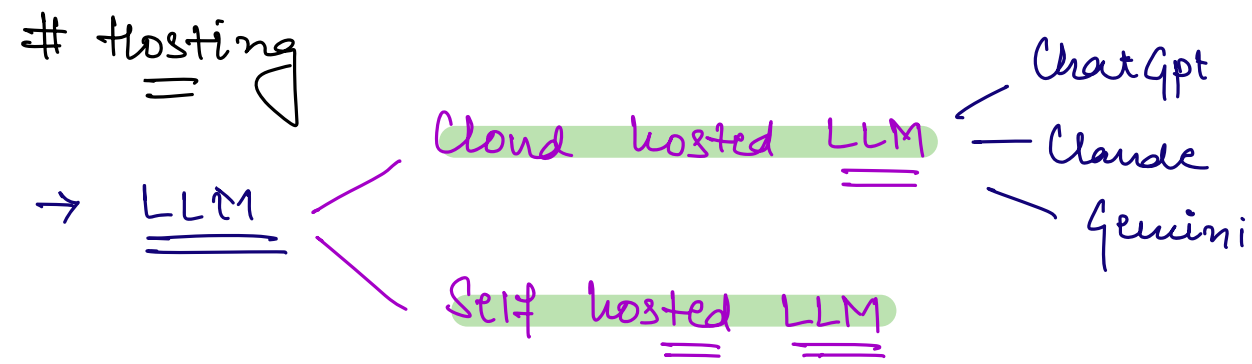

↳ Blue → Current Version

↳ Green → New Version.

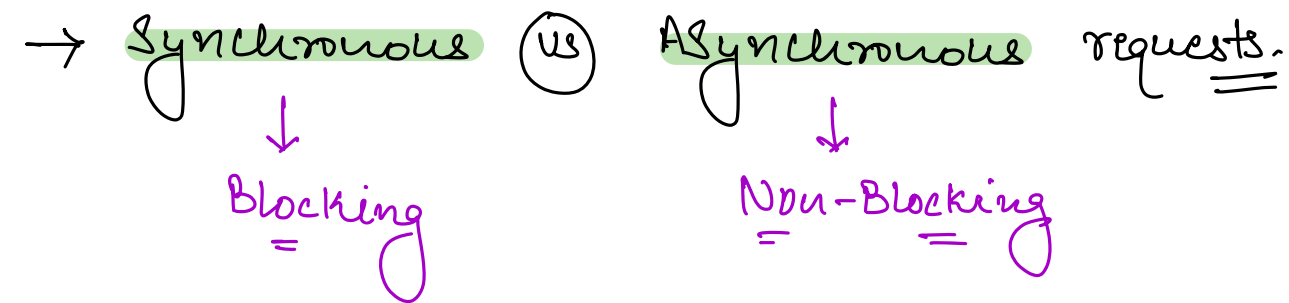

→ Canary

90% traffic → Current Version

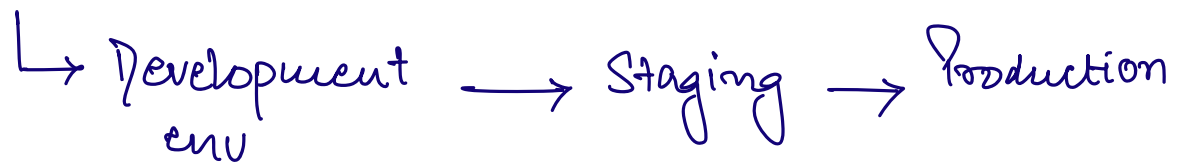

10% traffic → New Version

Runtime Choices.

Environments.

Observability.

↳ logging & Monitoring

Request Flow

Resources Utilization.

Agent Started

LLM call

LLM response

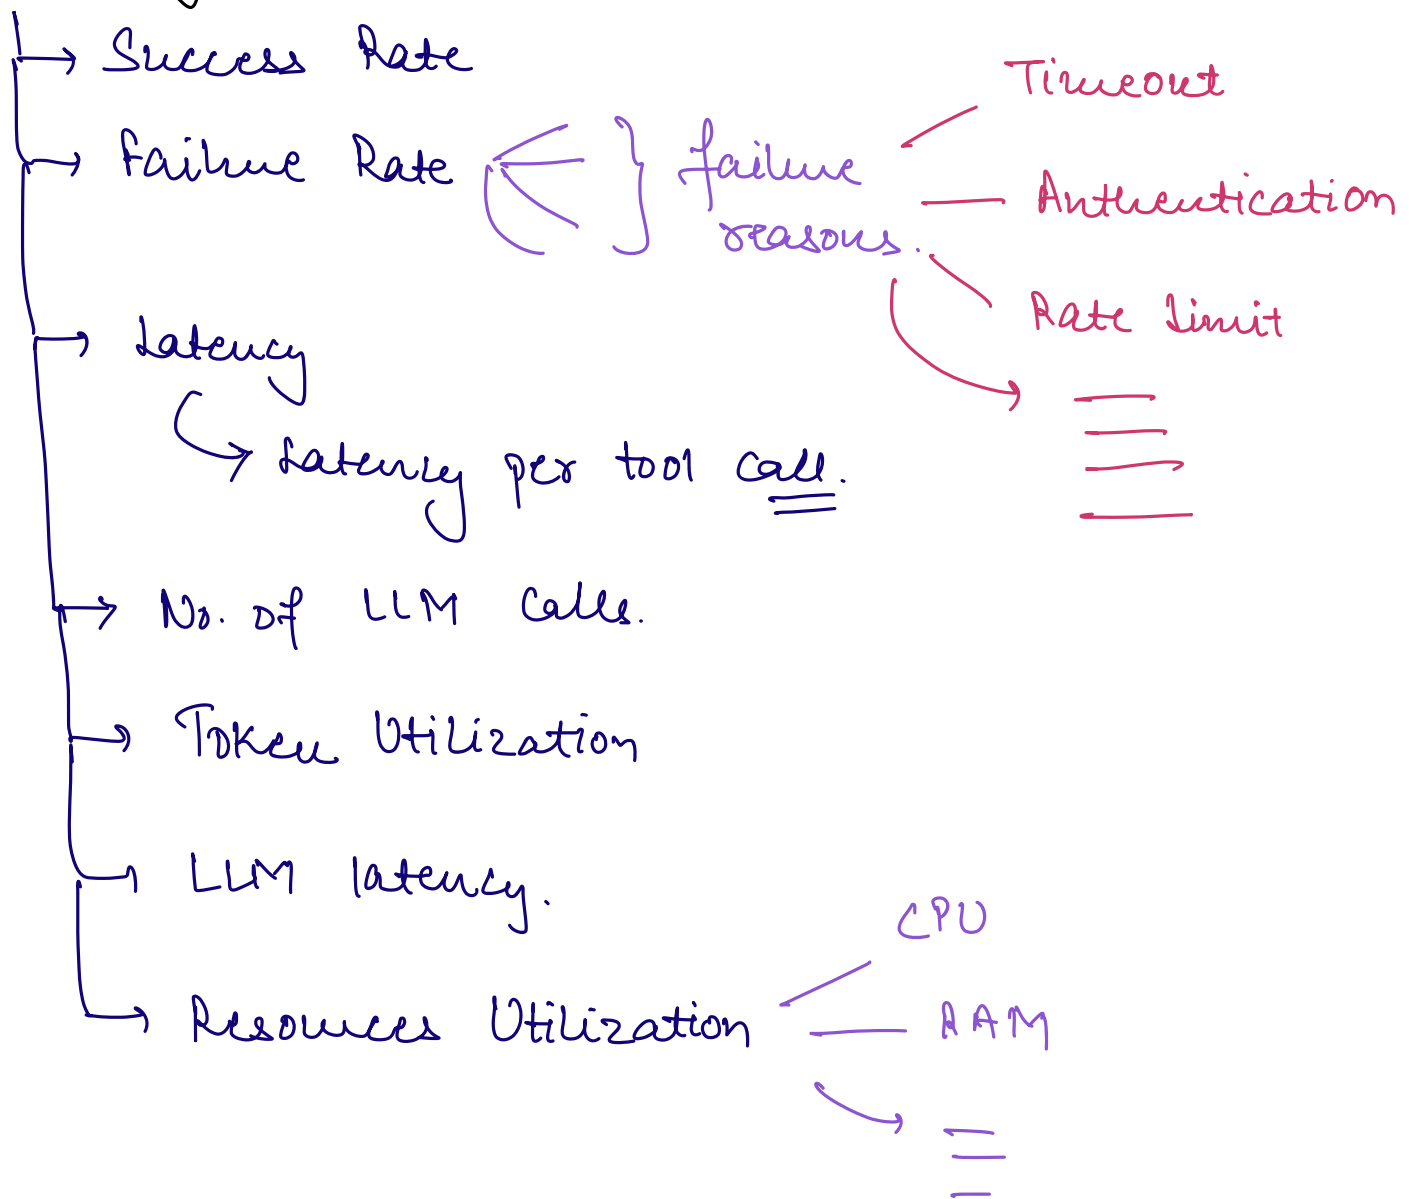

Tool Call

Tool Response

Monitoring

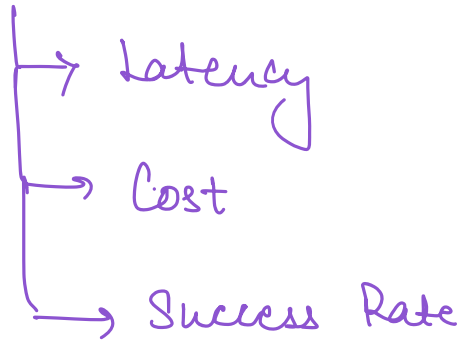

logging Agent decision makes the Application easier to debug.

request-id / trace_id.

→ Every request gets a unique id at the time it enters into the system & this id helps us to get the logs / monitors for this request.

Performance Tracking

Quality Metrics.
