

⇒ LLM

↳ Large Language Models.

→ OpenAI, Gemini or Claude.

API KEY
↓
Client = OpenAI ()

Set API key in environment variable.

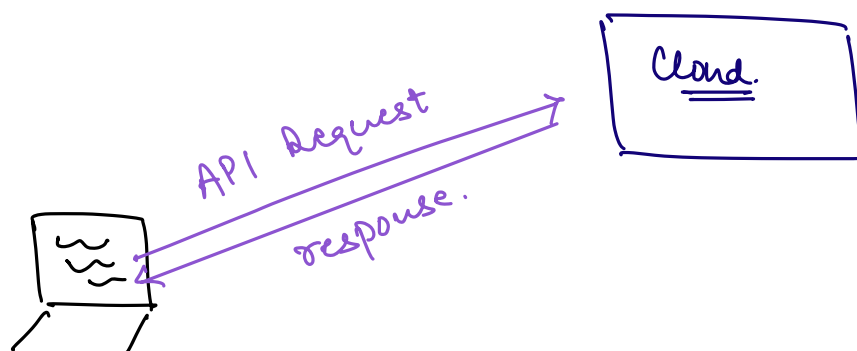

export OPENAI_API_KEY = " _____ "

Client = OpenAI ()

Client.responses.create(

)

API Call.

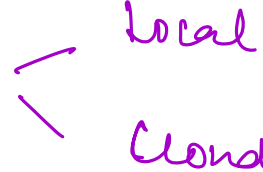

⇒ We can also run LLMs locally.
↓
Download.

Why do we need local LLMs?

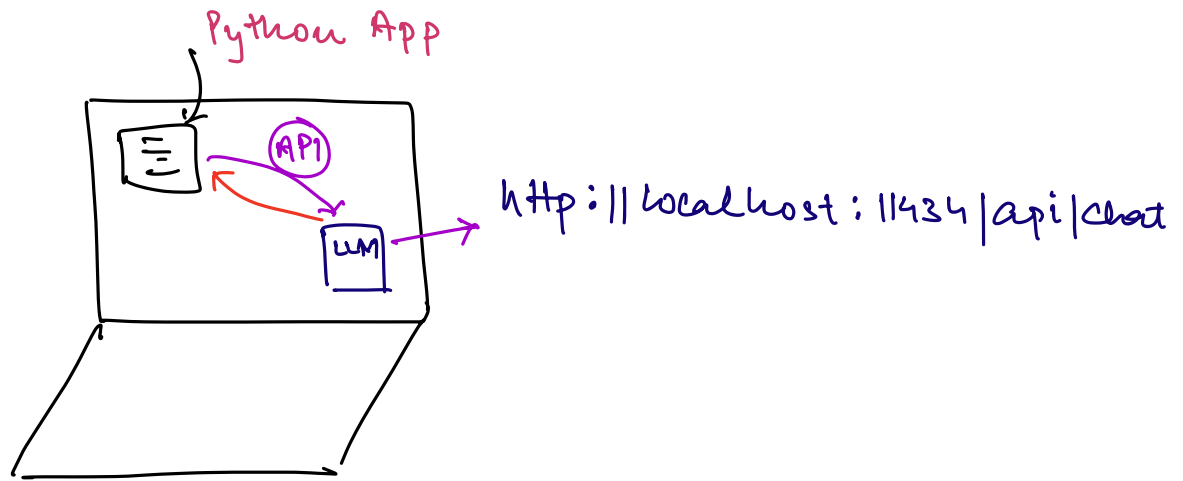

- Security & Privacy
- Cost.
- Offline development.

Ollama.

→ Ollama is a tool that helps us run LLMs locally & use them.

Ollama 
Local
Cloud.

⇒ While running an LLM locally, Ollama behaves like a small AI server running on our m/c.

Hardware Consumed = by a model.

→ HDD

→ CPU

→ GPU

→ RAM

→ Battery

→ Bandwidth

→ Small model can hallucinate
