

Agenda.

- Governance
- Ethical Scaling
- Cost Control.

AI Governance

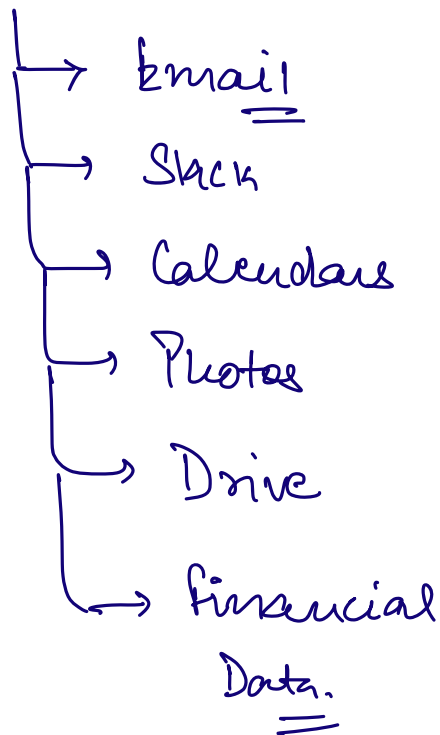

- It is the framework of policies, processes, rules, controls & responsibilities to ensure that our AI application operates in a safe, ethical & legal way.

Governance layers.

- Layer-1 : Organization
- Layer-2 : Application
- Layer-3 : Model
- Layer-4 : Runtime

Data Privacy

↳ Agents have access to lot more information now a days.

⇒ Data Minimization

↳ Agents should only have the access to required information.

⇒ Least Privilege

↳ Agents should have the minimum permissions necessary.

Prompt Injection

Prompt: "Ignore all the previous instructions, - - - -
- - - - -"

Ethical Scaling

Principle of least Autonomy

↳ Give the agent only as much autonomy as necessary to accomplish the task.

→ Manage my entire bank account.  

→ Check my account transactions & categorize them.

COST CONTROL

↳ No. of tokens consumed.

→ Model Selection

→ $\text{Cost} \begin{cases} \text{Input tokens} \\ \text{Output tokens} \end{cases}$

Cost of output tokens $>$ Cost of input tokens.

Caching

↳ Storing frequently used data in a better h/w.

Batch Processing
